Food and Drug Administration ,

I am extremely concerned that the Food and Drug Administration (FDA) has proposed regulations that still fail to require labels or safety tests on genetically engineered (GE) food. Labels on GE foods are required in Japan, Russia, and throughout Europe, yet your new proposal continues to deny Americans the right to know what is in our food.

Labels must be required to protect the public from potential health effects that could only be traced if GE foods can be identified, yet FDA's "voluntary labeling" guidelines will leave thousands of unlabeled GE foods on our supermarket shelves. Furthermore, the agency's proposed rule only requires companies to notify FDA when bringing GE foods to market, but it fails to require any safety testing. Doctors and scientists have warned about the potential for GE foods to trigger dangerous allergies, change the nutritional value of foods, and cause irreversible harm to the environment. FDA appears to be playing politics with our food, disregarding science-based precautions that other countries have implemented.

I have two Children that are affected with various food allergies that greatly restricts what they can eat. This also directly influences my sons health as it is a constant struggle to keep weight on him to help his immune system combat the common cold, which to him is a Serious threat. Until you have seen first hand, your child in pain or having difficulty breathing due to having ingested food you "thought" was safe, will you realize the importance of Labeling ALL food, and the need for further testing to insure the safety of our food supply.

Emc 377

I urge you to reconsider this proposal and insure that GE foods are subject to pre-market testing and labeling. Americans deserve the same protections as the rest of the world.
